To help make your home delivery go as smoothly as possible, we recommend the following tips:

1. All walls and walkways in the path of the delivery must be cleared. Remove pictures, mirrors, nails, plants, tables, etc.
2. Have the set up area for new furniture clear of existing furniture.
3. Remove any breakable objects in the delivery area.
4. Lay rugs, blankets or cardboard down to protect wood, tile, or light carpet floors.

To help make your home delivery go as smoothly as possible, we need to be sure we can get your delivery to you.

1. Can our delivery vehicle make it up your driveway? Is there a place where the delivery vehicle can turn around once they reach your house.
2. How steep is your driveway?
3. Are there any hairpin turns that our truck might not be able to maneuver?
4. How wide is your driveway? Are there any branches in the way? Will it be a problem if our truck breaks any branches?
5. Are there any low electrical wires, cables or tree branches near or around your driveway?
6. Is your driveway paved, gravel or dirt? If the driveway is dirt, is there a possibility our truck will get stuck if the drive is muddy? Also, if the drive is muddy, is there a problem if our trucks leave deep tire tracks in your driveway?
7. Are there any narrow bridges, ditches or dips in the road that could pose a problem due to the weight and length of our truck?
8. Will your driveway be accessible if it has snowed or is snowing? If our truck is unable to make it up your driveway, could you be available with a pickup truck to meet our delivery truck to unload the furniture?
